Kind of like the AR3100 but Better

There's no doubt that APC is an excellent company who manufactures a quality product but in the interest of sharing how we think the SharkRack T2 cabinet of a similar size is superior we've generated this handy sheet to keep our current and prospective customers in the loop.

- SharkRack T2 cabinets can be produced a-la-carte without extending your lead time.
- SharkRack offers one of the largest cabinet paint shops in the country- we have a wide variety of standard and custom colors to choose from.
- SharkRack's Multi-Bay kit fits flush- no air leakage.
- SharkRack T2s feature six zero U spaces.
- The T2 features extensive integrated cable management features.
- The T2 allows for more passive airflow than the AR3100.
